

Introducing CarpooltoSchool.com

A Powerful New Solution for School Pool Programs.

CarpooltoSchool helps transportation planners, regional governments and transportation management agencies (TMAs and MPOs) promote school pool programs that reduce fuel energy usage, emissions and traffic congestion. Our solutions target kindergarten through college, are fully customizable, and provide statistical tracking and data analysis for school pools.

We support multi-level administration capabilities. Schools can individually brand sites and make announcements, parents can plan and manage carpools, and transportation planners can provide incentives and track success of programs at the individual school, district, and county level.

CarpooltoSchool Provides:

User Friendly Tools

CarpooltoSchool provides an easy-to-register, easy-to-use, secure custom website for each school and its parent community. Schools that join the carpooltoschool.com network average over 10% participation of parents.

Incentive Support and Announcements

CarpooltoSchool provides an easy way to communicate with school-approved drivers and other parents who are signed up with the system. Transportation planners can use our announcements feature to highlight carpool incentive programs.

Statistical Tracking

We track the number of matches made, vehicles removed from the road, carpools scheduled, and carpools in operation. We also provide customized statistics based on your requirements.

Complete Off-site Hosting

CarpooltoSchool offers convenient, off-site hosting. Sites are administered by individual schools and by CarpooltoSchool – no additional administration is maintained at the county or state level.

Fundraising Opportunities

CarpooltoSchool offers the opportunity for schools to make money via affiliate advertising. Schools receive 50% of any revenue generated from their custom subsite.

Our powerful software tools include an easy carpool matching interface, scheduler and tracker, and reminders that alert drivers when it's their turn to drive. All of which make carpools easier to start, join and manage.
